

Heat Action Plan

What to know about heatwaves

Heatwave Warnings WA

Advice - Stay up to date

Prepare now for a heatwave that will affect your area in coming days

Watch and act - start taking action

Start taking action and prepare for very hot conditions

Emergency warning- act immediately

Drink water, stay indoors or seek out air-conditioned places. Be aware of heat stress, and check on family and friends, especially the elderly.

How to Keep Cool

- **Keep hydrated** by drinking plenty of fluids. Fluids include water, diluted juice (mixed with water) and low sugar sports drinks.
- **Stay indoors with your air-conditioner or fan on** (ensure adequate ventilation if using a fan). If you do not have air-conditioning or a fan, close windows and doors shutting off rooms you do not need access to block out the heat.
- Limit time outdoors. **If you need to go outside, try to do so in the early morning or late evening.** If you do go outside make sure to put on a hat and sunglasses, apply sunscreen and try to stay in the shade.
- **Take care when you buy, store, and handle food** in hot weather to reduce the risk of food poisoning.
- **Wear lightweight, light-coloured and loose-fitting clothing.** Use natural fibre fabrics; cotton, linen and silk work best in absorbing sweat and allow the skin to breath.
- **Sleep with just a sheet over you** in the coolest part of the house.
 - If your pet sleeps with you and 'warms up' the bed, it may be time to find them a different place to sleep!
- If possible, try to avoid warming up your home by using an oven or stove when cooking.
- Think about **installing insulation** and roof cavity cooling if you do not have it already.
- **Keep curtains, blinds and windows closed during the day.**
- **Take a cold shower or put your feet in cold water to cool yourself off.**

*Sign up for check in calls during heatwaves by emailing btnshire@bridgeton.wa.gov.au
